

## The Neal Kinsey NZ Group

Kinsey's word is spreading

**Neal Kinsey**, by popular demand is returning to NZ in 2012 for the third time to present his three day "Principles of Building Soil Fertility" courses.

Neal of Kinsey Agricultural Services, Charleston, Missouri is a soil fertility specialist who lectures and consults to farmers and horticulturists world-wide serving 66 countries.

Golden Bay Dolomite Limited and the Neal Kinsey NZ group is pleased to inform that again in 2012 we are to sponsor this "dean" of soil fertility to visit Taupo, Bay of Plenty and Invercargill, Southland to present his three day "Principles of Building Soil Fertility" workshop.

Neal is one of the foremost practitioners of the Albrecht – style soil fertility balancing and is the author of his book "Hands on Agronomy."

Many of the attendees of the previous years' courses followed up on Neal's teaching and advice. As a result they have proved to themselves and others that biological farming is the new way forward. Many have reported positive changes to pasture, animal health and **profit!** This is especially pleasing considering the challenging seasonal weather conditions and recessionary times.

The Taupo course is to be held at the Huka Falls Lodge Taupo March 5<sup>th</sup> 6<sup>th</sup> & 7<sup>th</sup> 2012.

The Invercargill course is to be held at the Ascot Hotel Invercargill on March 12<sup>th</sup> 13<sup>th</sup> & 14<sup>th</sup> 2012.

Often farmers become bogged down in the detail of a sophisticated soil audit and are confused as to whom to believe.

Neal conveys the message of soil fertility in a simple to understand manner that just makes sense to his audience.

Neal offers world-wide examples of how and why the system works including examples from New Zealand.

What we learn from the successful Albrecht system of soil balancing is that when calcium and magnesium and all other nutrients including the micro-nutrients are in proper balance in the soil, crops thrive, animal health improves, weed and insect pressures lessen and yields and soils improve season after season.

In addition Peter Norwood, leading Australian Animal Nutrition Specialist will conduct a 2 hour presentation called 'Dust to Dust'. Some of the points he will educate on are:

- some of the soil balance issues he see's in Australian Soils
- how these imbalances then affect plants, animals and ultimately us!
- farmers are the providers of critical nutrition
- the opportunity going forward as nutritionally dense food producers
- learn about forerunning technology – hair analysis - measuring nutrient density for animals and humans

This year's sponsors Golden Bay Dolomite Limited and the Neal Kinsey NZ group would like to extend an invitation to you to attend this course.

We believe that the investment of \$620.00 (plus G.S.T.) and the time in attending these three days will enhance your knowledge and perhaps the knowledge of your colleagues into the future – we look forward to you participating in a three day course.

We are passionate about the services and products we provide as healthy soils are a prerequisite for healthy crops, healthy animals and healthy people. It is the informed farmer who is at the forefront of this chain. The goal of all farming operations must be to produce top quality nutrient dense food for our generation, our children and our grandchildren.
